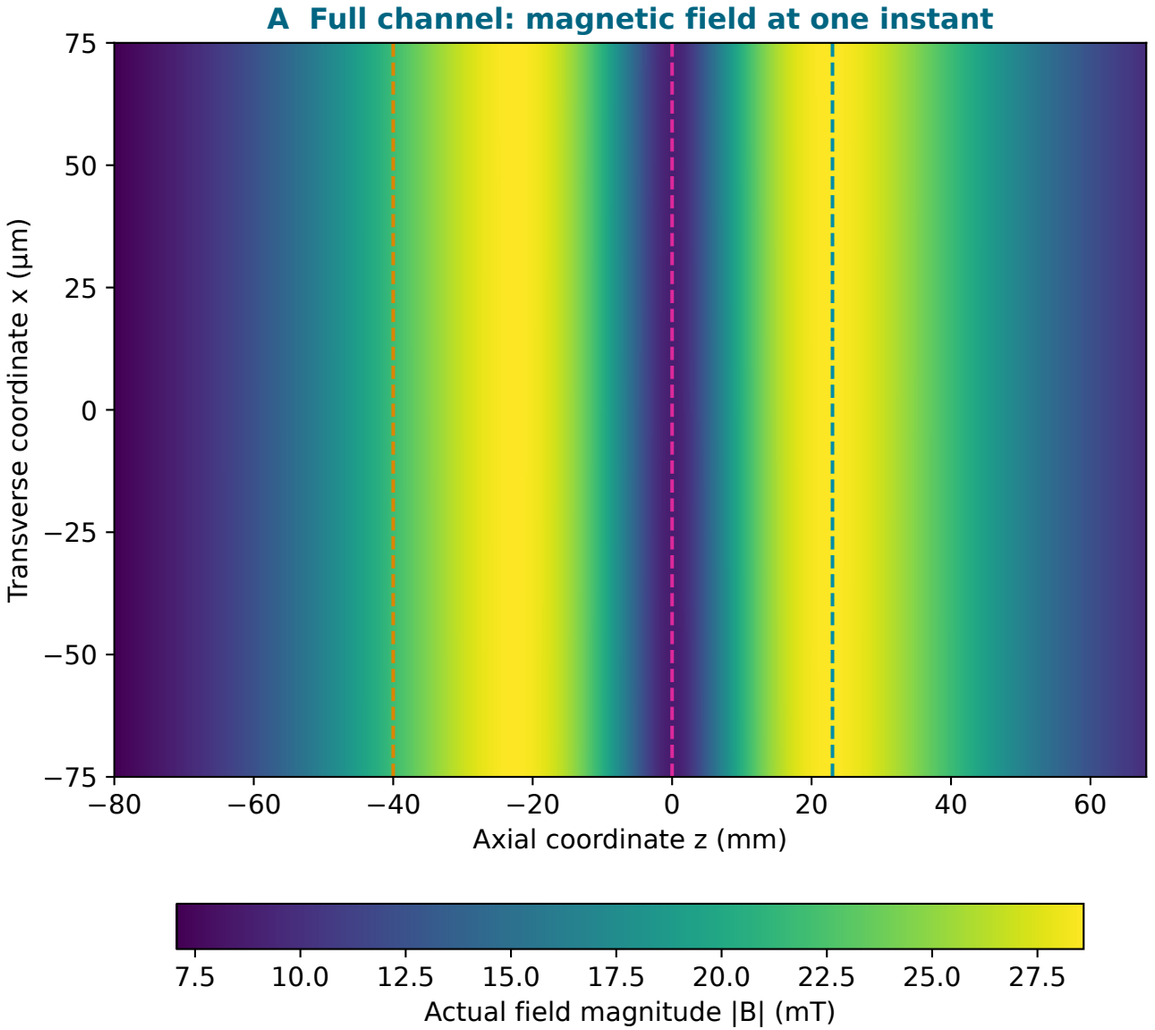
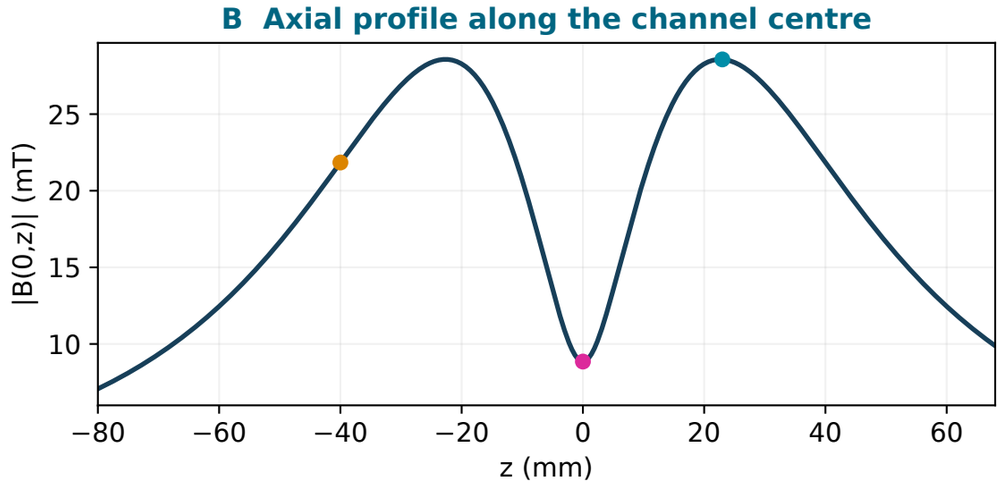
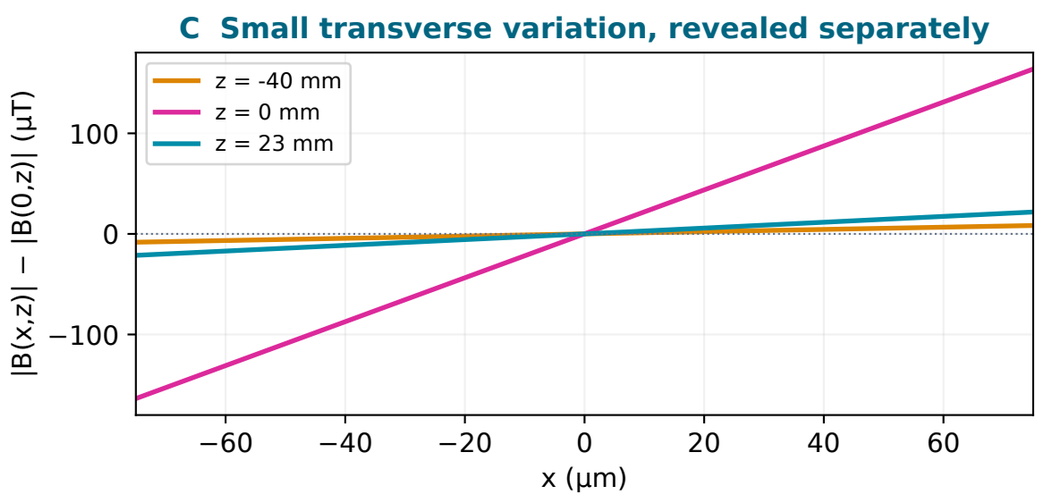
FIXED-TIME MAGNETIC FIELD | Case 12: phase-controlled two-source chirp

t = 0.80 s · a_left = 0.1109 · a_right = 0.1672 · full channel width = 150 µm







A: actual magnitude. C: difference from the centre value at each chosen z, not the actual magnitude and not prediction error.

Prescribed analytical source field used by Master10. Channel axes use mm and µm; the displayed aspect ratio is not the physical aspect ratio.
